

Your design proof is on page 2

Trim Area

To avoid unwanted white borders at the edge of your final product, your design should extend to the outer edge. Important information, such as text should not extend into this area since it's at the risk of being cut off.

Safety Line

The solid line shows the edge of the safe area. Your design should extend beyond the safety line into the trim area, but important content should remain within the safety line to avoid being cut off.

Safe Area

Everything inside this area is safe.
Keep all important content within this box.

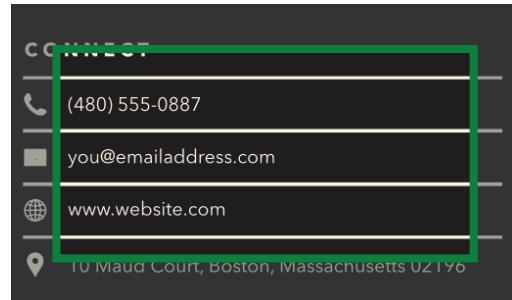

Keep your text in the safe area

✓ DO

Keep your text and important content within the safe area to ensure it's not cut off.

✗ DON'T

Any text or important content outside the safe area may be cut off.
